Tanks

August 13, 2008

To Whom It May Concern,

The following Norwesco below ground tanks are manufactured using the same mold:

300 gallon sphere pump tank/325 gallon sphere cistern tank

500 gallon sphere pump tank/550 gallon sphere cistern tank

500 gallon septic tank/600 gallon cistern tank

1000 gallon 2 manhole septic tank/1000 gallon 2 manhole Bruiser tank/1200 gallon cistern tank

1250 gallon 2 manhole septic tank/1250 gallon 2 manhole Bruiser tank/1400 gallon cistern tank

1500 gallon 2 manhole septic tank/1500 gallon 2 manhole Bruiser tank/1700 gallon cistern tank

Septic tanks are yellow, Bruiser tanks are blue and cistern tanks are white. The difference in gallons is due to the number of usable gallons a tank has. If it's used as a septic or Bruiser, the gallons are measured up to the outlet. If it's used as a cistern, the gallons are measured to the top of the tank. When used as a septic or Bruiser, many states require that the gallons are stamped into the tank so a non-removable plate is in the mold to allow this to happen. That is why a tank may have a molded-in designation as a 1000 gallon but the UPC code and serial number will designate which tank you've actually received.

Detectable Tape

- Pro-Line's Detectable Marking Tape is used for detecting, locating, identifying, and protecting buried utility lines for gas, water, sewer, telecommunication, and electrical markets.
- The width of tape used, is determined by the size of, and depth at which the underground utility line is buried.
- The depth at which detectable tape is buried, is determined by the width of the tape used.
- Aluminum core is detected through means of inductive locating.
- Line is located and marked after inductive locating is performed.
- Utility type is identified by both the APWA color-code and utility legend printed on the marking tape.
- Detectable tape works 24 hours a day and year round, even if tape is not inductively located during excavation, the tape provides a "stop-sign" effect that is highly visible.

- A self-flushing action cleans the emitters every time the system turns on and off, reducing maintenance and extending the life of the emitter.
- Strong check-valve protection helps conserve water by eliminating low-point drainage and flooding.
- With a diameter less than a dime, the emitter is unobtrusive and easily hidden
- Designed to hold prime in the line, these emitters immediately begin irrigation and reduce cycle times.
